

Essentials for Memorization (Chapter Two)

Comprehension: the completely articulated sum of the intelligible aspects of a thing
(basically, a list of all that goes into the *whatness* of the thing)

Extension: all of the things to which the concept of a thing refers

Important Facts about Comprehension & Extension

1. Every concept has both comprehension and extension.
2. The greater the comprehension the lesser the extension and vice versa (the bigger the list of aspects, the fewer things it can be talking about).
